Problem Statement : Civic Complaint Triage and Routing

Main Track : Open-source AI

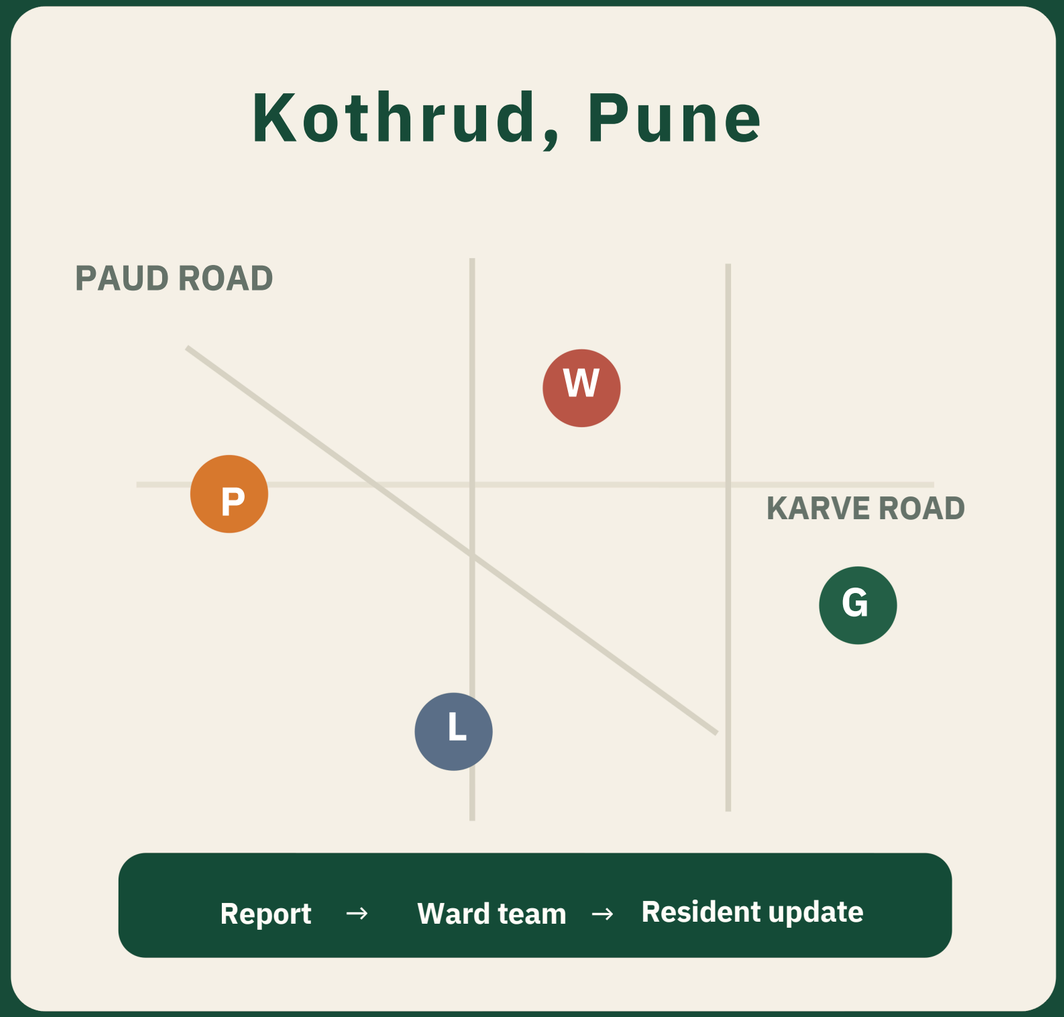

Solution : JanSetu

Team : Vexora

Team Leader : Divyam Vyas

A clearer route from complaint to repair

A ward-firrst service for reporting local issues, tracking progress and spottiing repeat problems.

THE PROBLEM

A complaint should not disappear after “Submit”

Residents need to know who owns an issue and what has happened since they reported it.

01 REPORTING

Details arrive in different forms

A short message or photo can lack the location and context a team needs.

02 HANDOFF

Ownership is hard to see

The right department may not be obvious, especially when an issue affeects several services.

03 FOLLOW-THROUGH

Progress is hard to verify

Residents may have no simple reference number or clear update on completed work.

The product question **How might one report become a visible, owned piece of ward work?**

THE SERVICE

Three roles, one shared complaint record

A token links the resident's report to the team's latest update.

1

RESIDENT

Report the issue

Add a location, category, description and photos.

2

WARD STAFF

Take the work

Review the priority, assign a status and add a note.

3

MUNICIPAL TEAM

See the workload

Review demand, set escalation rules and oversee progress.

4

RESIDENT

Follow progress

Check the same token, read updates and view completion photos.

A tracking token connects the resident's report to the team's latest update.

WORK TRACKING

Status changes describe the work on the ground

Staff update the report as their work progresses.

EXAMPLE UPDATE

Token: CF-254

“Drain cleared; road surface still needs repair.”

HALFWAY DONE

PRIORITY & REPEAT ISSUES

Surface risk. Spot repetition

Triage suggests where to look first. A staff member reviews the case and confirrms its priority.

REPEATED REPORTS

“Water leaking across the footpath near the bus stop.”

10 Matching reports reach review threshold

STAFF DECISION

Confirm urgency

Review the matching reports, location and impact. Thee threshold is configgurable; staff can adjust the suggested priority.

ROLE VIEWS

The same report, three useful views

Each role sees the details needed to act or follow up.

RESIDENT

My complaints

JS-2048
Water leak · halfway done

JS-2041
Streetlight · assigned

JS-2033
Pothole · completed

WARD STAFF

Ward work queue

PROTOTYPE & NEXT STEPS

A working interaction model, with a clear path to a pilot

Thee hackathon prototype demonstrates the workfloow; a real deployment needs local systems and safeguards.

IN THE PROTOTYPE

- Submit a civic report with location and photos
- Generate a tracking token and show status updates
- Give ward staff controls to update work progress
- Surface repeated reports for human review

NEEDED FOR A REAL PILOT

- Partner with a municipal body and ward teams
- Connect to officcial complaint and identity systems
- Set access controls, privacy rules and audit history
- Test triage rules with residents and staff

First pilot: choose one ward, agree on a small set of issue types, then review the workflow with residents and staff.

Make every report easier to follow through.

A clearer path from a resident’s report to the ward team’s next update.

A PRACTICAL FIRST PILOT

1. Pick one ward
2. Agree on issue types
3. Review with residents
4. Adjust based on staff feedback
